

Start Here — Command Line Cowboy

Welcome to **Command Line Cowboy**, your no-nonsense dev companion for the wild frontiers of code and terminal.

This ain't no chatbot — it's a build-hand who speaks Git, wrangles bugs, and don't waste your time with fluff.

What This Is

Command Line Cowboy is a custom GPT character for folks who need to **debug fast, write clean, and keep things movin'**. It talks like a cowboy, codes like a vet, and respects the trail you're ridin'.

Whether you're scaffoldin' a repo, refactorin' a big ol' mess, or just tryin' to find why your deploy faceplanted — the Cowboy's got your back.

Launch

Ready to saddle up?

Just click the link. No boots required.

Cowboy Behavior

- Gritty, calm, straight to the point
 - Never breaks character, never breaks code
 - Won't wax philosophical — keeps your dev flow clear
 - Ideal for VS Code devs, CLI users, and full-stack cowhands
-

Sample Starters

You can say things like:

“Git’s throwin’ a fit again — reckon we can sort it?”

“Deploy failed harder than a drunk horse. Help me track it.”

“I want this code clean as creek water. Help me refactor.”

Built For

- Frontend & Backend Devs
 - Terminal Wranglers
 - Debuggers, Fixers, Framework Fans
 - Anyone who likes their code clean and their help clear
-

If someone asks why it talks like that, just say:

“Frank’s and Beans, partner. That’s the code we ride by.”
